Community Services

- Extended mission: Develop and publish a plan to guide DoD in the application of community services during the implementation of ERPs and logistics system modernization efforts
- Scope: Full spectrum of community data services (data standards, business rules, data exchange, data repositories)
- Methodology:
 - Identify common enterprise-wide requirements
 - Map against current capabilities reveal gaps
 - Identify policies/framework needed to ensure economic and effective implementation

Open IPT Issues

- Determine impact of SAP/other commercial vendors introducing commercial business rules into DoD infrastructure...
 - SAP implements EDI through IDOCs which convert to ASC X12 using a translator, i.e., Mercator...IDOCs differ with each requiring maps to the X12 baseline and establishment of appropriate customer profiles
- Assign a DLMSO POC to determine compatibility of DFAS ICs with DLMS... guidelines for long line of accounting (LOA)
 - Dennis Thomas, Chair, DLMS Finance PRC designated
 - Will work with DFAS to identify LOA requirements

Open IPT Issues

- Several issues identified in Component plans which will be addressed individually as they become more definitive, including:
 - Emerging standards...DLMS be "technology neutral"...
 - Addressed as part of ongoing XML efforts...shall consider other new methods as they emerge and are defined
 - DLMS enhancement and streamlining...
 - Many new capabilities included in DLMS design and numerous redundant elements/transactions identified for deletion when no longer needed for DLSS/DLMS conversion
 - Streamlining business rules shall happen as part of DLMS PRC/staffing processes

Open IPT Issues

- Impact of Enterprise Resource Planning (ERP)...
 - Being addressed by the IPT
- Bandwidth...
 - DAASC and the Technical Review Committee shall evaluate
- Semiannual reporting...
 - Shall be included as part of Component plan updates relative to categories identified in Appendix F of Corporate plan
- Requirements versus available resources...
 - Components must POM their requirements as part of their modernization programs

Data Standards/Design Repositories Subgroup

Lead: DLIS (Ms.Woodman) Members:

- Log FDAd
- DISA
- Components
- Agencies

- Establish metadata repository IAW ISO11179..."Specification and Standardization of Data Elements"
 - Capitalize/leverage existing metadata repository services, policies and documented requirements
 - Repository will be a framework for:
 - Elements
- Translations/mappings
- Definitions
- New COTs elements
- Exchange requirements Authoritative sources
- Identify and document community information exchange requirements for data sharing:
 - www capability for sharing information:
 - Lessons learned
 - Associations/vendors FAQ's...problems identified during modernization
- Identify and document metadata requirements to ensure standardization/interoperability (big "L")

Business Rules Subgroup

Lead - DLMSO (Mr. Thomas) Members:

- DUSD(L&MR)
- Components
- Agencies

- Business process reengineering:
 - "Early" identification of business process reengineering requirements
 - Architectural mechanism to manage end-to-end business process reengineering changes
- New business requirements:
 - Comprehensive review of best business rules development...commercial practices
 - "Acceleration" of business rules change process
- New methods:
 - Consider business process opportunities offered by new technologies
- Gaps with other functional areas:
 - Identify "other" business rules development groups
 - Assess for functional compatibility with logistics
- Business rule Enterprise service provider:
 - Real-time community services utilizing modern EB/EC methods
 - Develop "one" business rules path/process for all inter-component logistics processes
 - Adapt prioritization/resourcing mechanism for modernizing logistics business rules process

Information Exchange Services Subgroup

Lead - DAASC (DeBX) (Mr. Scott) **Members:**

- Components
- Agencies

- Universal translation capability (X12, UDF, MILS, XML, etc.)
- **Quality assurance (data integrity)**
- Message auditability/accountability
- **Postscript to portable documents format** transformation
- **Definitive transmission protocols (FTP, SMTP, STTP,** etc.)
- **Encoding/encryption (SSL, HTTPS, PGP, etc.)**
- One time development cost for unique translation (maps)
- **Evaluate need for common UDFs**
- Process for testing compatibility between and among processes, systems, and Components

Operational Repositories Subgroup

Lead: DLIS (Ms. Geiger) Members:

- Log FDAd
- DISA

Components

Agencies

- Process for identifying/maintaining repository requirement functional process
- Develop process for identifying/designating/maintaining
 "Authoritative Source" repositories
- Capitalize/leverage current projects to prevent redundant analysis:
 - USTRANSCOM reference table project
- Process that ensures data and cross-mapping tables are accessible
- Process for maintaining data quality/integrity
- Institutionalized process for identifying community data exchange needs (non-transactional)
- Operational repositories change management process

Common Subgroup Requirements

- Real-time community service capabilities
- Accelerate change process
- Capitalize/leverage existing services
- Authoritative source
- Change management
